Education

Indian Institute of Information Technology, Kota

Aug 2023 - May 2027

B.Tech in Computer Science and Engineering

Vijay Jyoti Academy, Dewas

Apr 2021 - Mar 2023

12th Class in PCM, State Board

Result : 90.8%

Work Experience

Inditech Technology Services Pvt. Ltd.

Apr 2025 – Jan 2026

Product Development Intern

Remote

- Developed full-stack healthcare applications using **Python, Django, and PHP**, integrating **RESTful APIs** for secure, real-time data exchange.
- Improved system performance by **30%** through **SQL query optimization**, database tuning, and backend refactoring, reducing latency and enhancing service reliability.
- Performed **SQL-based data analysis** and backend performance monitoring to identify bottlenecks and improve application efficiency.
- Resolved **critical production bugs** and contributed to automated API/backend testing workflows using **Git-based CI pipelines**, improving system stability and reliability.

Coincent.ai ([Link](#))

Apr 2024 – Jun 2024

Artificial Intelligence Intern

Remote

- Developed and fine-tuned a **Vision Transformer (ViT)** for image classification, increasing accuracy by **15%** via optimized hyperparameter tuning and data augmentation.
- Built an end-to-end **NLP pipeline** using **TensorFlow/Keras**, achieving **92% test accuracy** in text classification through custom tokenization and model optimization.
- Evaluated and optimized machine learning models using **Scikit-learn** and **Matplotlib**, conducting iterative experimentation and performance analysis to improve prediction accuracy, generalization, and reliability on unseen datasets.

Projects

TBO: AI Travel Platform | *React.js, Tailwind CSS, Node.js, Gemini API, Vercel*

Live Project

- Designed and implemented reusable UI components using **React.js** and **Tailwind CSS**, delivering responsive and intuitive user experiences across web and mobile devices.
- Built an AI-powered travel assistant using **Gemini API**, leveraging prompt engineering and LLM-driven workflows to generate personalized travel itineraries and recommendations.
- Developed a semantic search system using NLP techniques to enhance intent matching and improve travel recommendation relevance.

Crave-Corner: MERN Restaurant Platform | *React, TS, Stripe, MongoDB*

Live Project

- Architected a production-ready platform integrating **Stripe API** for secure transactions and Cloudinary for efficient asset management.
- Improved system reliability by reducing runtime errors by **30%** using **Zod** validation and robust state management, while leveraging logs and performance monitoring to ensure stable operation under load.
- Implemented secure **JWT-based authentication** and scalable REST APIs, improving application stability through error handling and logging.

Technical Skills

Languages: JavaScript, Python, SQL, C/C++

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Responsive Web Design

Core CS: OOP, DBMS, Operating Systems, Data Structures & Algorithms

Backend & Databases: Node.js, Django, REST APIs, MongoDB, MySQL

Cloud & DevOps: AWS (EC2, S3, CloudWatch), Docker, Git, CI/CD

Testing: Postman, API Testing, Integration Testing, REST API Validation

AI: Generative AI, RAG, LangChain, LangGraph, Gemini API, OpenAI API

Achievements and Certifications

LeetCode Knight Badge: Attained a contest rating of **1800+**, ranking among top global percentiles.

CodeChef 3-Star: Achieved a peak rating of 1600+ through consistent competitive programming.

GSSoC '25 Contributor: Selected as an Open-Source Contributor for the GirlScript Summer of Code.

AWS Solutions Architecture Virtual Experience: Completed the APAC Virtual Experience via Forage. [Link](#)

JPMorgan Chase Software Engineering: Completed the Forage Software Engineering Job Simulation. [Link](#)
