Education

Indian Institute of Information Technology, Kota — **Aug 2023 - May 2027**
B.Tech** in **Computer Science and Engineering

Vijay Jyoti Academy, Dewas — **Apr 2021 - Mar 2023**
12th Class** in **PCM, State Board — *Result : 90.8%*

Work Experience

Inditech Technology Services Pvt. Ltd. — **Apr 2025 – Jan 2026**
Software Development Intern — *Remote*

- Developed full-stack healthcare applications using **Python, Django, and PHP**, integrating **RESTful APIs** for secure, real-time data exchange.
- Improved system performance by **30%** through database query optimization and backend refactoring, reducing latency and enhancing service reliability.
- Collaborated in **Agile** sprints to deliver production-ready modules adhering to healthcare security standards, while monitoring logs and improving system reliability.
- Resolved **critical production bugs** and contributed to automated API/backend testing workflows using **Git-based CI pipelines**, improving system stability and reliability.

Coincent.ai *(Link)* — **Apr 2024 – Jun 2024**
AI/ML Intern — *Remote*

- Developed and fine-tuned a **Vision Transformer (ViT)** for image classification, increasing accuracy by **15%** via optimized hyperparameter tuning and data augmentation.
- Built an end-to-end **NLP pipeline** using **TensorFlow/Keras**, achieving **92% test accuracy** in text classification through custom tokenization and model optimization.
- Evaluated model performance using **Scikit-learn** and **Matplotlib**, performing iterative experimentation to enhance generalization and prediction reliability across unseen datasets.

Projects

Crave-Corner: MERN Restaurant Platform | *React, TS, Node.js, Express, Stripe, MongoDB* — **Live Project**

- Architected a production-ready platform integrating **Stripe API** for secure transactions and Cloudinary for efficient asset management.
- Improved system reliability by reducing runtime errors by **30%** using **Zod** validation and robust state management, while leveraging logs and performance monitoring to ensure stable operation under load.
- Implemented secure **JWT-based authentication** and scalable REST APIs, improving application stability through error handling and logging.

Retrieval-Augmented Generation (RAG) Application | *Python, Qdrant, OpenRouter, Sentence Transformers* **GitHub**

- Built a **PDF-based Retrieval-Augmented Generation (RAG) system** for answering user queries using information retrieved from document collections.
- Implemented a document ingestion pipeline with **PDF text extraction, recursive chunking, and batch embeddings** using Sentence Transformers.
- Stored document embeddings and metadata in **Qdrant** and implemented **Top-K cosine-similarity retrieval** to fetch relevant context for each query.
- Integrated **OpenRouter LLMs** with context-only prompting and generated responses with **document, page, and snippet citations** to reduce unsupported answers.

Technical Skills

Languages: Python, C/C++, JavaScript, TypeScript, SQL, Bash
Core CS: OOP, DBMS, Operating Systems, Data Structures & Algorithms
Backend & Databases: Node.js, Django, REST APIs, GraphQL, MongoDB, MySQL, PostgreSQL
Cloud & DevOps: AWS (EC2, S3, CloudWatch), Docker, CI/CD (GitHub Actions, Jenkins), Git, Linux/Unix
AI/LLM: LLM Applications, AI Agents, Prompt Engineering, Gemini API
Testing & Security: API Testing, Automated & Integration Testing, Postman, Pytest, Debugging, JWT Authentication

Achievements and Certifications

Competitive Programming: LeetCode **Knight** (1800+) & CodeChef **3-Star** (1600+).
Flipkart GRiD 8.0 Semifinalist: Advanced to the national-level semifinal round.
GSSoC '26 Contributor: Selected as an Open-Source Contributor for the GirlScript Summer of Code.
AWS Solutions Architecture Virtual Experience: Completed the APAC Virtual Experience via Forage. Link
JPMorgan Chase Software Engineering: Completed the Forage Software Engineering Job Simulation. Link
